

Combined GRP Sectional Enclosure

Introduction

Nicholson Plastics Ltd is a leading manufacturer of water storage tanks since 1968, with a proven track record to supply glass reinforced plastic (GRP) one piece tanks, sectional tanks, housings and custom moulded products.

Product Description

GRP Hot Press Sectional Enclosures are a tidy, cost effective solution for water storage. Manufactured from GRP making it a durable lifelong enclosure which includes a practical working space for water tank ancillaries including water pumps & electrical equipment, these enclosures are suitable for both internal and external applications.

Benefits Include

- Very Compact
- Professional enclosure
- GRP material
- Light weight, 1/10 weight of concrete & Steel
- High Strength
- Corrosion resistant
- Ease of handling, installation and transportation.
- Deliverable on pallets; negates the requirement for a hi-ab
- Speedy assembly on site
- Saving on cost and space, two products direct from one supplier
- Low maintenance
- Long life materials
- Tank ancillaries available
- Suited to individual or repeat projects

The combined enclosure tanks are a tidy, cost effective method of storing water and electrical equipment. They are ideal for external storage which can save time modifying an existing building and save space compared to a separate enclosure and tank. The product provides two solutions in one.

Enclosure dimensions on the end of tank

Length is variable as the tank section can increase depending upon capacity required. The housing would normally be 1m, 1.5m or 2m though there would be no maximum on the tank element as this would be dependent on the capacity.

Length	Variable
Wide	2m
Height	2m

The GRP tanks are available with an externally flanged base and an internally flanged base, internally flanged (IF) and totally internally flanged (TIF – SpaceSaver) tanks. We offer a full project management service from initial design to final installation. All our tanks and carry WRAS approval certification.
