Product Description

The STP660 simplifies product selection and improves control loop performance with its unique probe assembly. The shaft is simply extended and inserted into the pocket, ensuring a good contact.

The STP sensor can be used with a vast range of other manufacturers' pockets when used in conjunction with the pocket adaptor DWA0001. The use of the adaptor avoids system drain downs and costly down time.

The STP660 has a 7-second response time, making it the optimum choice for economic control solutions.

This sensor is available with the standard 'Satchwell' temperature sensor output characteristic.
